Continuing Our Commitment to Excellence for Your Care

The Ohio State University Wexner Medical Center Dodd Rehabilitation Hospital

Accredited by the Commission on Accreditation of Rehabilitation Facilities since 1975

As a consumer of health care and rehabilitation services, you have a choice. You should choose a facility that has demonstrated a long-standing commitment to meet the nation's highest standards of quality, consumer satisfaction, safety and outcomes measures for rehabilitation, as set by the Commission on Accreditation of Rehabilitation Facilities (CARF). Dodd Rehabilitation Hospital embodies this commitment to continuously improve service quality and to focus on the satisfaction of our patients.

As part of this commitment, Dodd Rehabilitation Hospital voluntarily participates in the CARF International surveying process. CARF International is an independent accrediting body of health and human services. CARF accreditation means that Dodd Rehabilitation Hospital has demonstrated compliance with proven standards for business practices and is strongly committed to continuous quality improvement.

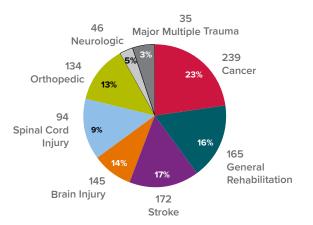

We know you have a choice in your rehabilitation care. We strive to exceed expectations and provide the excellent care that you deserve. We are proud to share these survey results with our current and future patients so you are confident that you are making the best choice for rehabilitation care for yourself or your loved one.

2023 Dodd Rehabilitation Hospital OUTCOMES

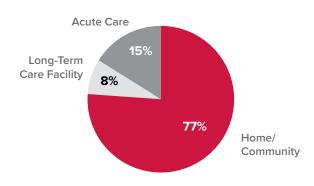

Patient Age/Number

Patients Treated at Ohio State's Inpatient Rehab Services

Patient Discharge Locations

Data percentages may not total 100% due to incremental statistical rounding. Differences in data equal less than 1%.

Outcomes by Condition

Outcomes by Condition	# of Patients Discharged ¹	Case Mix Index ²	Average Age	Average Length of Stay	Average Change in GG ³ Self- Care Score	Average Change in GG Mobility Score	Average GG Gain per Day	Discharged to Home/ Community ⁴	Discharged to Long-Term Care Facility ⁴	Discharged to Acute Care Center ⁴	Gender

Stroke	185	1.53	64	12.8	11.9	26.8	3.3	72%	18%	10%	54% Male, 46% Female
Cancer	239	1.38	65	11.5	14.5	33.3	3.8	69%	8%	23%	51% Male, 49% Female
Total	1,269										

¹Total number of patients served in the specific categories includes a population of 239 oncology patients who are counted under both the oncology and an appropriate secondary impairment population. We want to be as clear as possible about the number of patients we treat in each impairment category, so the oncology-specific patients were included in both categories, as appropriate for their care needs. The total patient number is 1,030 patients in 2023 as shown in the graph on the previous page.

Category descriptions:

General Rehabilitation includes patients with arthritis, burns, congenital deformities, pain, debility, pulmonary or cardiac deficits, or other disabling impairments.

MMT (Major Multiple Trauma) includes patients with both major multiple trauma including brain injury/spinal cord injury and patients with major multiple trauma who had no brain injury/spinal cord injury.

Orthopedic includes orthopedic and amputation patients.

We look forward to caring for you

For additional information, visit wexnermedical.osu.edu/rehabilitation.

² Case mix index (CMI) reflects the diversity, clinical complexity, and resource needs of all the patients in the hospital. A higher CMI indicates a more complex and resource-intensive caseload. A lower CMI indicates a less complex and resource-intensive patient caseload.

³ GG: Section GG functional abilities — GG scores are determined by measuring average changes in self-care and mobility functional abilities.

⁴Data percentages may not total 100% due to incremental statistical rounding or discharge to other destination not listed above. Differences in data equal less than 1%.
