You need to draw a Blood Bank Sample, WHAT DO YOU NEED TO DO?

Step 1: Using the Brain to Collect Blood

Step 2: Scan the patients’ armband
- If you’re unable to scan the armband, verify patients’ legal name and Medical Record Number with the patients chart.
- If the patient does not have an armband, verify the patients’ legal name and date of birth (if the patient does not have an armband) with the patients chart.

Step 3: Print the labels in the presence of the patient and label the tube(s)
Step 4: Collect the specimen from the patient

Step 5: Scan the specimen

Step 6: Send the Specimen(s) to the lab.

SCAN THE TUBE BEFORE YOU MOVE
