## Self-Administered Gerocognitive Examination (SAGE) Administration and Scoring Instructions

SAGE is a brief self-administered cognitive screening instrument to identify Mild Cognitive Impairment (MCI) and early dementia. Average time to complete the test is 15 minutes. The maximum score is 22 . A score of 17 and above is considered normal.

## Administration:

The test is self-administered. It should be filled out in ink without the assistance of others. Inform the examinee that there are four pages to complete. Calendars and clocks should not be available during the testing. Do not answer specific questions. Just say, "Do the best that you can".

## Non-Scored Items:

Demographics
Insight: Have you had any problems with memory or thinking?
Family History
Motor symptoms
Stroke symptoms
Depression symptoms
Personality changes
Functional abilities
