TLIF/POSTERIOR LUMBAR FUSION POST-OPERATIVE REHABILITATION GUIDELINE

- No NSAIDs for 6 months
- No driving while on narcotics
- No scar mobilization for 3 months
- No jog/run/horseback riding for 6 months
- Education booklet to patient before surgery (smoking cessation)
- All patients progress at different rates...progress as appropriate, with goal completion

**Phase 1 (POD 1 - 6 weeks)**

- Brace, if needed, is patient specific
  - Typically needed for those with poor bone quality, smokers, sustained spinal fractures
  - Multi-level fusion may require longer wear

Focus:
- Mobilization, correctly performing ADLs
  - Putting shoes on, correctly picking items off ground, etc
- Ambulation, endurance, posture
  - Begin progressive walking program
- Correct usage of assistive device

**Phase 2 (6 weeks - 3 months)**

- Begin regimented OP PT (2-3x/week) for 6-8 weeks (12-24 visits)
- Give ODI, FABQ at initial evaluation
  - FABQ at 6th visit as well

Goals:
- ↓ pain, 0-2/10 pain at rest
- Improve scar mobility
- Maintain erect posture throughout 80% of the day
- Reestablish neuromuscular control of the lumbar stabilizers
- Volitional contraction of TA and lumbar multifidi for 5 x 5 sec
- Improve LE strength & mobility
- Demonstrate appropriate functional movement within precautions
- Continue progressive walking program
- Independent with HEP
- Progress exercises once patient demonstrates proper form/technique and control of neutral spine with each repetition
- D/C brace at 12 weeks or surgeon's orders

Focus:
- Initiate aerobic conditioning (gentle, progressive)
  - Ambulation, endurance
  - Progress toward discontinuing assisted devices
- Treadmill, track, recumbent bike
- Continue to walk within tolerance with progressive walking program

- Strengthening (legs core back)
  - Can use light weights, pulley system, resistance bands
  - Isometric lumbar stabilization exercises with trunk ext/flex/lateral flexion
    - 15s → 45s x 3
  - Lumbar stabilization exercises (with trunk co-contraction) – 2 x 10,15,20
    - 1. Hook-lying pelvic neutral (hip at 45°): marches → SL heel slide → leg lift c knee ext.
    - 2. dying bug: alt. UE → alt. LE → alt. opposite UE/LE
    - 3. Bridges
    - 4. birddog: alt. UE → alt. LE → alt. opposite UE/LE
    - 5. pelvic tilts (all directions)
  - LE strengthening exercises (maintain neutral spine) – 2 x 10,15,20 (progress c resistance):
    - 1. wall squats
    - 2. supine abdominal crunch (not a sit-up)
    - 3. Hook-lying bent knee fall outs
    - 4. Side-lying hip abduction/clamshells
    - 5. standing hip extension

- Stretching, LE flexibility
  - Bilateral LE stretching 3 x 30s (gastoc/soleus, hamstrings, hip flexor)
  - Nerve glides 2 x 10...15...20

- Balance, POSTURE, Gait training
  - Neuromuscular activation of lumbar stabilizers (multifidi, TA)
    - Diaphragmatic breathing
    - Abdominal isometrics, hollowing of TA and lumbar multifidi
    - Drawing in maneuver and VC for volitional lumbar multifidi contraction
  - Maintain neutral spine, initiate pelvic tilts in all directions
  - Appropriate lumbar lordosis

- + / - pool therapy
  - Swimming within tolerance

- Functional movement for home/work
  - Proper body mechanics
    - Bend with knees when reaching toward floor
    - Shift weight, don't twist body
    - Lift slowly, close to body
    - Bring feet/leg up to self when donning/doffing shoes, socks
    - Scoot to front of chair when standing

- Education/review on precautions, anatomy/biomechanics, surgical procedure, prognosis
- Control pain/inflammation
  - ice/modalities
    - Manual
      - Grade I-II joint mobilizations above/below surgical site for pain modulation
      - Soft tissue mobilization for hypertonic paraspinal muscles
  - Facilitate healing of incision (watch for increased redness/drainage/swelling)

Suggested Components for Daily HEP:
- Pain management PRN
- Appropriate stretches
- LE strengthening with neutral spine

For OSUWMC USE ONLY. To license, please contact the OSU Technology Commercialization Office at https://tco.osu.edu.
- Postural awareness, pelvic tilts
- Abdominal hollowing in isolation and with extremity movement
- Progressive walking program as tolerated, monitoring steps
  - See end of protocol

Avoid:
- Lifting, bending, twisting > 20 lbs until 3 months post-op (BLTs)
  - Includes yardwork, pushing/pulling
- Sitting prolonged periods - encourage position changes 30-45 minutes
  - Sit with back support, feet flat on floor, knees level with hips
- Lotions/creams, submerging incision underwater until fully healed

Other considerations/precautions:
- Brace wear as indicated by surgeon
- Consult doctor for return to driving, return to work
  - May be shorter return for sedentary jobs
- Sleeping
  - Supine with pillow under knees
  - S/L with pillow between knees

Phase 3 (3 - 6+ months)

- ODI + FABQ at discharge

Goals:
- Progress to return to baseline standing/walking duration, distance
- Maintenance of trunk co-contraction throughout therapeutic activities
- Volitional contraction of TA and lumbar multifidi for 7 x 7 sec → 10 x 10 sec
- Maintenance of neutral spine during therapy interventions
- Improve trunk and LE strength
- Achieve functional ROM
- Demonstrate proper ergonomics and work simulation
  - Able to tolerate work simulation activities without increase in symptoms
    - Verbally understands return to work progression
- Continue, ultimately complete progressive walking program
- 0-2/10 pain with activity → 0/10 pain with all/most activities
- Independent with HEP
- Achieve ODI MCID

Focus:
- Progress endurance
  - Aerobic conditioning
    - walking/treadmill
    - Progress to elliptical
- Trunk + LE mobility, flexibility
  - Aim for mid-end range ROM by 3-4 months
    - Quadruped rocking, cat/camel, prayer stretch
  - Bilateral LE stretching
- Strengthening
  - Increase weight limit by 5 lbs every other week as tolerable
- Muscle Strength of lumbar stabilizers
  - Dynamic exercises
    - with trunk co-contraction – 2-3 x 10,15,20:
      - 1. Hook-lying pelvic neutral (hip at 90°): marches → SL heel slide → leg lift c knee ext.
      - 2. sitting or standing pelvic neutral: alt. UE → marching → marching c alt. UE
      - 3. SL bridges or DL c marches
      - 4. prone and side-lying planks (on knees: 5-10 sec)
      - 5. standing isometric core resistance c Theraband
      - 6. standing pelvic neutral: shoulder ext, hor. abd., row, D1/D2 c Therband (bil → uni)
  - Further progressions - 2-4 x 10, 15, 20
    - bridges on Dynadisc or BOSU
    - upward/downward chops (cable column)
    - prone and side-lying planks (off knees: 5-10 sec)
    - walkouts/rollouts on stability ball
    - cable column resistance walking (close to body → away from body or OH)
    - prone superman’s
  - LE strengthening exercises (maintain neutral spine) – 2-3 x 10,15,20 (progress c resistance)
    - 1. stability ball wall squats
    - 2. standing hip abduction and extension
    - 3. side stepping
    - 4. lunges (SP and FP)
    - 5. SL deadlifts
  - Further progression (2-4x)
    - squats (DL → SL)
    - SL deadlift on Dynadisc or BOSU
    - lateral band walks
    - lunges (add TP)
    - stability ball H/S curl
  - Core strengthening (planks)
    - Facilitate neuromuscular re-education
      - Abdominal hollowing of TA, lumbar multifidi
    - Balance, progressing as needed
      - DL → SL, EO → EC, no UE mvmt → UE mvmt, stable → unstable surface
        - High level
          - Rebounder toss, medicine ball rotations on stability ball, etc
    - Pain/inflammation reduction
      - Joint mobilization (grades I-II) above/below surgical site for pain modulation
        - ice/modalities
  - Light work simulation activities → full duty work simulation

Suggested Components for Daily HEP:
- Stretches, ROM (progress to maintenance therapy)
- Trunk, LE strengthening, stabilization (progress to maintenance therapy)
- Proper lifting and functional movement
- Progressive walking program
## Recommendations for return to work based on job type:

<table>
<thead>
<tr>
<th>Work Type:</th>
<th>Return to Work:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sedentary (&lt;10lbs) or Light (frequently 10lbs, occasionally 20lbs)</td>
<td>After 8-14 weeks, with limited sitting duration for 30 min at a time for 6 weeks</td>
</tr>
<tr>
<td>Moderate (frequently 20lbs, occasionally 50lbs)</td>
<td>At 10-16 weeks, patient may return to light duty if available – no lifting &gt;10lbs</td>
</tr>
<tr>
<td></td>
<td>At 14-20 weeks, return to full duty – no lifting &gt;25 lbs</td>
</tr>
<tr>
<td>Heavy (frequently 50lbs, occasionally 100lbs)</td>
<td>At 10-16 weeks, patient may return to light duty if available – no lifting &gt;10lbs</td>
</tr>
<tr>
<td></td>
<td>At 14-20 weeks, moderate duty – no lifting &gt;25lbs</td>
</tr>
<tr>
<td></td>
<td>At 22-28 weeks, return full duty</td>
</tr>
</tbody>
</table>
### Progressive Walking Program, begin POD 1

<table>
<thead>
<tr>
<th>AIM:</th>
<th>MODEL OF PROGRESSION:</th>
</tr>
</thead>
</table>
| 10,000 steps/day, if: age under 65 years, healthy and no restrictions to increase physical activity | 1. If baseline level <5,000 (sedentary), number of steps is increased 15% every other months until the target level is reached.  
2. If baseline level 5,000–7,499 ("low active"), number of steps is increased 10% every other months until the target level is reached.  
3. If baseline level 7,500–9,999 ("somewhat active"), number of steps is increased 5% every other months until the target level is reached.  
4. If baseline level >10,000 (active), this level is maintained or number of steps is increased 5% every other months until 12,500/day ("highly active") is reached. |
| 7,500 steps/day, if: age >65 years and/or chronic diseases and/or some restriction to increase physical activity | 1. If baseline level <4,250, number of steps is increased 15% every other months until the target level is reached. In later phase, this level is maintained or a new goal is set.  
2. If baseline level >4,250, number of steps is increased 10% every other months until the target level is reached. In later phase, this level is maintained or a new goal is set. |
